

Every child has the right to survive with optimal development

Inherited Metabolic Disorders (IMD), are lifelong genetic disorders which prevent patients from turning food into energy. Children with IMD need supplements and treatments to survive and develop normally.

The Aga Khan University Hospital is the only tertiary care in Pakistan that can provide treatment and care for patients with IMD. Our mission is to ensure that every child with this debilitating condition is able to receive care and treatment, regardless of their ability to pay.

Your monthly contribution can change a child's life; making the difference between a child leading a normal life versus suffering because of brain damage and physical impairment.

You can help us by sponsoring a child's treatment.

Sponsorship costs vary by the type of disorder. Please see the attached brochure for the sponsorship opportunities.

Donate from USA

Donate from UK

Donate from Pakistan

Donate from Canada

Donate from other countries

*Kindly designate your gift to the IMD sponsorship programme
at the Aga Khan University.*

Every gift counts.

Make a difference with us and sponsor a child's treatment.
